

Feasibility study with AtkinsRéalis for large-scale green hydrogen production

Ceres is collaborating with AtkinsRéalis, member of the SNC Lavalin Group, to accelerate adoption of Ceres' Solid oxide electrolysis cell (SOEC) technology within hard to abate industrial sectors.

The initial project will assess the optimum system architecture for a 100MW SOEC installation. The study will demonstrate how Ceres's solid oxide technology can be integrated into large industrial applications at scale.

In addition Ceres and AtkinsRéalis will work together to develop channels to market within key sectors such as steel and ammonia production.
