

Weichai 120kW CE certified fuel cell system uses Ceres' technology

Clean power provided by fuel cells brings simplicity, lower cost, improved efficiency and much lower carbon footprint.

Weichai in partnership with Ceres has developed a CE certified 120kW solid oxide fuel cell power system. Weichai estimates that when its product reaches 1GW of distributed power deployed, it has the potential to save around 600 million cubic metres of natural gas, compared with traditional natural gas generators.

Weichai's system has the ability to start and stop up to four times faster than other technologies, whilst achieving power generation efficiency of more than **60%** and cogeneration efficiency more than **85%***.
